What does the promise protect?

Human by choice | A Policy Window advocacy programme

Use one proposed AI change to ask who decides, who benefits and what must actually be provided. Record views and unknowns; completing this aid does not establish agreement, representation, legal rights or a decision to proceed.

Record title: _____

Which promises need examining? Choose any that matter.

- ☐ People continue performing or learning the work
- ☐ People hold meaningful authority or a way to challenge
- ☐ People receive income or share economic gains
- ☐ People can obtain human help, time or care

The proposed change

Name the workflow, service, task or arrangement. Describe what would change, for whom and where. Do not start by assuming it saves time or is harmful.

1. What should be protected?

Name the contribution, value or benefit. Explain why it matters, including if AI becomes more capable.

2. Who can secure it?

Name the person or institution, actual power, decision stage, duty bearer and route to challenge a failure.

What does the promise protect?

3. Who benefits, who pays and who is outside?

Include workers, service users, entrants, contractors, unpaid carers and people waiting for access where relevant. Identify money, human time and enforcement capacity.

4. What could change the choice?

State the strongest objection and a credible alternative, including keeping the present arrangement or using helpful AI assistance. Say what evidence would change your view.

Evidence and unknowns

Separate observed evidence, source descriptions, forecasts and assumptions. For a rule, record jurisdiction, exact provision, edition and what still needs checking.

Disagreement and next step

Record competing views without inventing agreement. Name the next question, how it could be answered, and who would need authority to act. Leave responsibility unassigned if it has not been accepted.

Before calling it a protection: check the beneficiary, actual authority, resources and remedy. Include costs, people excluded and the strongest alternative. Specific legal applicability, institutional powers and resources need checking.
