Summary

National policies asserting domestic capability + decision-making over AI infrastructure: compute on shore, domestic foundation models, talent retention, export-control reciprocity. Specifically NOT 'sovereign AI' (which focuses on deployment restrictions) — sovereignty here is about productive capacity.

Contested question

Can mid-sized economies sustain frontier-tier AI capability domestically, or does the compute-cost curve favour US/CN/EU only? Active debate in India, Brazil, ASEAN policy literatures.
